prodware

Are you struggling with **outdated and disconnected systems?**

The Prodware Dynamics Cloud Transition proposal can set you free!

Transitioning to the Cloud, while essential, can be a confusing and frustrating process. We make it easy, fast and worry-free for you!

Prodware can help you simplify your Cloud adoption and improve your end user productivity with a **Business Applications Assessment**, identify potential transition blockers, discuss opportunities for improving your business processes, and recommend which apps and tools to move first.

Operational Benefits

Agility
From Cloud deployment options to a growing set of tools and capabilities, Dynamics 365 provides businesses the agility they need to grow their business.

Scalability
Dynamics 365 makes it easy and efficient for businesses to scale. Businesses can easily duplicate instances to new regions as they expand, helping them get up and running faster. Cloud deployment options also provide greater resource elasticity and flexible pricing, which reduces costs and risk for growing businesses.

Security
Cloud deployments make it easier to keep teams updated with the most recent software. Not only does this mean they always have the latest features, but it means they also have all the latest security updates.

Financial Benefits

Lower Total Cost of Ownership (TCO)

Dynamics 365 can help lower costs for a business. Cloud deployment brings many cost savings – moving from OPEX to CAPEX with scalable pricing.

Faster Time to Value

Dynamics 365 helps deliver faster time to value. Instead of wasting time implementing a monolithic solution, Dynamics 365 can help businesses get up and running faster.

Easier updates

Through the Cloud means companies can maximize the value of their software, getting the latest features into employees' hands sooner. And with familiar interfaces and tools – like Excel – teams will require less training and time to get comfortable using the software.

Providing a single-source of business intelligence

Prodware has developed a "Platform transition methodology" to help you execute secure platform transitions and reduce associated risks.

## Prodware 5-day Standard Dynamics Cloud Assessment Package

Our Standard Dynamics Cloud Assessment Package offers you cost-effective options to evaluate the move from any earlier version to Dynamics 365 in 5 days!

An assessment is the first step on the customer's Cloud journey, which will help to:

- Understand the Dynamics 365 On-Prem to Online value proposition
- Review business objectives and the Dynamics 365 platform benefits
- Define how the upgrade process can be structured with a focus on adopting standards and reducing effort and costs
- Plan for either a more detailed migration analysis or execute your migration project

Your Standard Dynamics Cloud Assessment in 5 days:

- Preparation / initiation
- Technical assessment
- Functional assessment
- Internal wrap-up & preparation of materials (migration plan etc.)
- Presentation of results / assessment summary

	ASSESSMENT INITIATION	TECHNICAL ASSESSMENT	FUNCTIONAL ASSESSMENT	SUMMARY
